

CARRY TEMP RANGE – TRANSFORMING DELIVERY VEHICLES

**Designed for urban
mobility and
electric vehicles**

Transform any conventional delivery vehicle into a **2-chamber delivery vehicle** in no time and ensure an **unbroken cold chain!**

The reusable system Carrytemp has been designed especially for store-to-door deliveries of fresh, perishable and frozen food products.

It is based on ecological passive cooling elements which allow you not only to decrease the emission of CO2 but also to highly reduce your transport costs since expensive service of refrigerated vehicles will no longer be necessary.

With a CarryTemp system **any conventional vehicle can be quickly transformed into a 2-chamber refrigerated vehicle.**

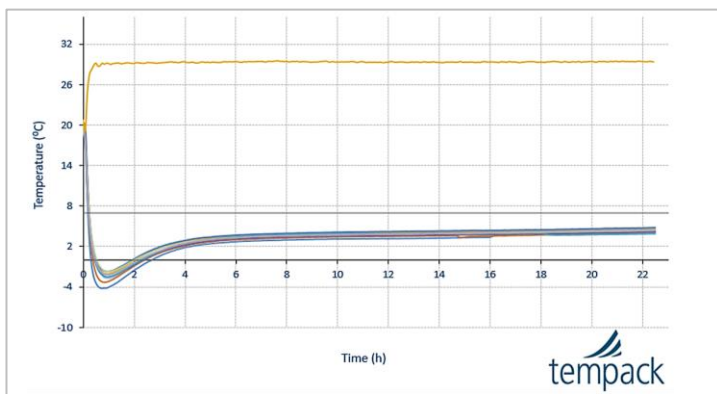

The system is extremely light compared to actively cooled vehicles or rotational molding insulated containers.

At the same time, the system provides exceptionally good insulation and very high robustness.

Advantages

- Transform an **ordinary vehicle into a refrigerated** vehicle.
- Perfect solution for all cargo bikes, electric and conventional delivery vehicles.
- **Excellent cooling** performance, **refrigerated & frozen during an entire working day.**
- Much **cheaper than an actively cooled vehicle** (dismantling is not necessary).
- **Extremely light** (only 30kg).
- **Smart city solution allowed into Zero CO2 emission zones.**

Temperature curve · Transport of goods at constant +30°C

- $+2^{\circ}\text{C}$; - 24 hours, even in midsummer
- For Vans, CargoBikes, Trikes, E-Scooter, etc.
